

Step 1 (Remember)

Update the massive import in order to import more and more documents

Step 2 (Remember)

- Find documents from the employee collection where the employee entry date is at least two years

Step 3 (Index)

- Create an index for the employee name and check the index creation
- Create a unique index for the employee email and provide a request to check the unique index
- Find another field and provide the request to check the performance of the index creation
- Create a composed index and **check its creation**

Step 4 (Aggregate)

- Provide employees from the different Paris districts (use the zipCode field)
- Provide employees categorized by age value
- Make the same above request and sort by the value
- Provide the number of employees whose age is 40.
